School of Technology and Computing (STC) @City University of Seattle (CityU)

Before You Start

- If you already learned Python in other courses, feel free to skim the document.
- The directory path shown in screenshots may be different from yours.
- Some steps are not explained in the tutorial. If you are not sure what to do:
 1. Consult the resources listed below.
 2. If you cannot solve the problem after a few tries, please contact the student worker through the MS Teams course channel.

Learning Outcome

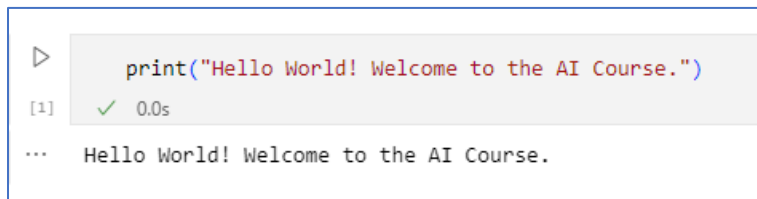

- Students will be able to learn Python basics.
-

Python Basics:

1. Type the following in VS Code

```
print("Hello World! Welcome to AI Course.")
```

Output is:

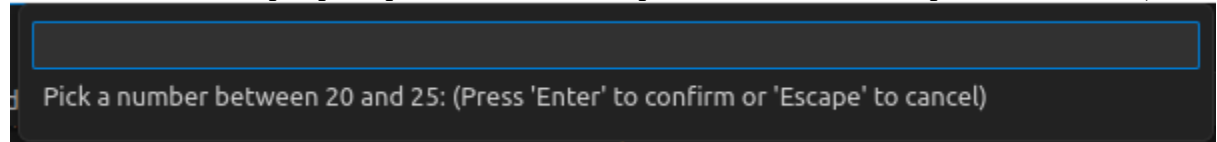

```
[1] ✓ 0.0s  
... Hello World! Welcome to the AI Course.
```

2. Type the following to generate a random number between 20 and 25

```
import random  
  
num = random.randint(20, 25)  
randomNumber = None  
print("Try to guess your number: ")  
print("-----")  
print("-----")  
while randomNumber != num:  
    numRan = input("Pick a number between 20 and 25: ")  
    guess = int(numRan)
```

```
if guess == num:
    print("Perfect, you did it!", guess)
    break
else:
    print("Sorry. Try again please!", guess)
```

Note that the user input prompt is in the center top where the command palette is located)

The output is:

```
Try to guess your number:
-----
Sorry. Try again please! 24
Sorry. Try again please! 23
Sorry. Try again please! 22
Perfect, you did it! 21
```

Take the screenshot for all steps and save it in your local repository. Save your ipynb file.

HOS submission instructions:

1. Please install the GitHub Desktop: https://cityuseattle.github.io/docs/git/github_desktop/
2. Clone, organize, and submit your work through GitHub Desktop: <https://cityuseattle.github.io/docs/hoporhos>
