School of Technology and Computing (STC) @City University of Seattle (CityU)

Before You Start

- The directory path shown in the screenshots may be different from yours.
- Some steps are not explained in the tutorial. If you are not sure what to do:
 - Consult the resources listed below.
 - If you cannot solve the problem after a few tries, please contact the student worker through the MS Teams course channel.

Learning Outcome

- Students will be able to set up Scikit-learn on the local machine.

Resources

- Scikit-learn: <https://scikit-learn.org/stable/index.html>
- Scikit-learn installation: https://scikit-learn.org/stable/developers/advanced_installation.html#install-bleeding-edge

Install Scikit-learn

Installation:

1. Open Visual Studio Code → Terminal → New Terminal

2. In the terminal window, type the command:

```
pip install scikit-learn
```

```
(base) PS C:\Users\yoonhee\OneDrive - City University of Seattle\Desktop> pip install scikit-learn
Defaulting to user installation because normal site-packages is not writeable
Requirement already satisfied: scikit-learn in c:\users\yoonhee\appdata\roaming\python\python310\site-packages
Requirement already satisfied: scipy>=1.6.0 in c:\users\yoonhee\appdata\roaming\python\python310\site-packages
Requirement already satisfied: numpy<2.0, >=1.19.5 in c:\users\yoonhee\appdata\roaming\python\python310\site-na
```

Note: In Windows, if you face an error that the system can't detect pip as a command as follows,

```
C:\Users\boghost pc>pip install tensorflow
'pip' is not recognized as an internal or external command,
operable program or batch file.
```

it might be because you have different versions of Python on your computer, or the pip executable is not part of PATH.

The “pip” executable file is located by clicking the start button

→ type %appdata% and enter(if this directs you to the “Roaming” folder ensure you navigate to the “AppData” folder)

→ locate Local/Programs/Python/Python{version}/Scripts folder. With the file explorer window open on the “pip” executable located folder, add the found path to your system by navigating to Control Panel → System and Security → System → click “Advanced System Settings” → Environment Variables → Click “Path” on the “User variables” → Click “Edit” → Click “New” and paste your directory Path → Click “OK” button → restart command line application to execute “pip” command.

Repeat the above step if the “python” command shows a similar error. Note that the Python executable is Local/Programs/Python/Python{version}/ folder.
